Dear Hiring Manager,

I am excited to apply for the SDE-2 Backend role. With 3+ years of experience at Zoho Corporation, I build scalable, high-performance backend systems using Java, Spring Boot, Node.js, and PostgreSQL.

At Zoho, I developed **Shredder**, a static code analysis tool adopted in 14+ products, eliminating 6,000+ unused JavaScript methods and reducing redundant code by 19MB. I improved API latency by 60% with Redis caching and optimized queries.

Beyond my industry work, I built **CollabGen**, a multi-tenant SaaS platform that uses Spring Boot, Kafka, Redis, WebSocket, Stripe and AWS S3 for real-time collaboration and subscription management. This reflects my ability to design distributed systems and deliver production-ready solutions.

I look forward to contributing my expertise in system design, scalability, and performance optimization to your team. My detailed resume can be found here.

Sincerely,
Dharmaraj R
