

Dharmaraj R

Software Engineer | 4+ years experience

Chennai | (+91) 6383392245 | dharmaraj.171215@gmail.com | [LinkedIn](#) | [GitHub](#) | [Substack](#) | [LeetCode](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend engineer with 4+ years of experience building high-throughput microservices, distributed systems, and data-intensive platforms using Java, Spring Boot, Kafka, and Redis. Currently part of large-scale database migration from Oracle to Google Cloud Spanner at PayPal. Strong in system design, data structures, and algorithms.

SKILLS

Languages & Frameworks: Java, JavaScript, Spring Boot, Node.js, REST APIs, Multithreading

Cloud & Architecture: Google Cloud, Docker, Microservices, Distributed Systems, Event-Driven

Databases & Core CS: PostgreSQL, Redis, Kafka, Data Structures & Algorithms, OOPS, Design Patterns, System Design

EXPERIENCE

Software Engineer (SDE-II)

Dec 2025 – Present

PayPal

Chennai, Tamil Nadu

- Architected the end-to-end migration of on-premises Oracle databases to Google Cloud Spanner using Striim for real-time CDC replication, ensuring zero data loss and consistency across different database and **billions of records**.
- Spearheaded an **AI-powered diagnostic tool** that auto-detects root causes of streaming pipeline failures and recommends targeted fixes, reducing mean time to resolution for data pipeline incidents by **40%**.
- Proposed and innovated an **in-house data migration framework** as a lightweight, cost-effective alternative to Striim with equivalent throughput, fault tolerance, and data integrity guarantees for future migration workloads.

Member Technical Staff

May 2022 – Dec 2025

Zoho Corporation

Chennai, Tamil Nadu

- Built a **static code analysis platform** adopted across **14+ products** and integrated into CI/CD pipelines, automatically eliminating **6,000+ dead methods** and reducing technical debt by **30%** across the organization.
- Refactored the Zoho CRM codebase by removing **1,680+ dead code fragments**, reducing JavaScript bundle size by **12%** and improving key page load times from **4s to 2.8s (30% faster)** for millions of active users across the platform.
- Engineered a high-throughput backend service handling **millions of metadata records** and **3,000+ concurrent users** with **sub-second latency** through connection pooling, query optimization, and efficient indexing strategies.
- Reduced API response time by **60% (500ms to 180ms)** through **Redis caching, Kafka-based async processing**, and advanced SQL query tuning, directly improving production SLA compliance and end-to-end system throughput.

PROJECTS

DataShifter (Spring Boot, Kafka, Redis, PostgreSQL, React, SSE)

[GitHub](#)

- Built a **SaaS database migration platform** using microservices architecture supporting multiple databases, achieving **151K rows/sec** throughput (**178x improvement**) via batch writes, connection pooling, and multi-threaded execution.
- Designed a **checkpoint-based execution engine** with pause/resume, SQL filter pushdown, and primary-key-based validation enabling **zero-data-loss migration** with accurate real-time progress tracking via Server-Sent Events.
- Implemented multi-tenant auth with RBAC, **Stripe/Razorpay** subscription billing with plan-based enforcement, and a Kafka-driven notification system with Slack webhooks and an **AI migration assistant** powered by Claude/Ollama.

CollabGen (Spring Boot, Redis, PostgreSQL, Stripe, WebSocket, React)

[GitHub](#)

- Developed a **multi-tenant collaboration platform** with feeds, real-time chat, tasks, and team management using **Spring Security, JWT** for auth, **WebSocket** for messaging, and **Redis Sorted Sets** for presence and online tracking.
- Achieved **3x faster data retrieval** through Redis caching and query optimization; integrated **Stripe** for recurring subscription billing and **AWS S3** for secure, fine-grained file storage at private, team, and organization levels.

EDUCATION

V.S.B Engineering College

Bachelor of Engineering | CGPA: 8.24/10

Karur, Tamil Nadu

Aug 2018 – May 2022

ACHIEVEMENTS

- Achieved **top 100 rank** in India in HackWithInfy coding contest; secured **rank 2,274 / 43,000** in LeetCode Contest 437.
- Solved **950+ problems on LeetCode** with a **365-day streak**, demonstrating strong DSA skills and consistency.
